Dear Hiring Manager,

My name is Kautsar Qaulan Sadida Baiquni, a Fullstack Web Developer specializing in frontend architecture. I am writing to introduce myself and express my interest in opportunities where I can help build fast, scalable and thoughtfully designed web products — and where I can keep learning from a strong engineering team.

Over the past two years I have shipped production software end to end. At Blue Soft IoT (Malaysia) I build company platforms and internal tools, including PHH Inventory, a steel-cutting and inventory management app built with React, Vite, TypeScript and Tailwind CSS. For the Serang City Government and the local Election Commission (KPU), I led the development of public-service websites and an e-Office travel-administration system, and I delivered Akapack POS, a point-of-sale platform now used by small businesses, with Next.js and Supabase. I work comfortably across the stack — from Next.js, React and TypeScript on the web to Flutter for mobile and Laravel on the backend — and I am quick to pick up new languages and tools.

I care deeply about the details that make a product feel premium: thoughtful motion, clean typography and a light, fast experience, all backed by maintainable code. I also have a solid foundation in the fundamentals — I am a POSN Informatics (national science olympiad) Gold Medalist — and a genuine interest in AI, with IBM certifications in Artificial Intelligence, Generative AI and AI Ethics alongside cloud fundamentals on AWS. I prefer understanding concepts over memorizing syntax, and I am always eager to ask questions and learn what I don't yet know.

I would welcome the chance to discuss how my experience and enthusiasm could contribute to your team. Thank you for taking the time to consider my application; you can explore my work and portfolio at web-portofolio-nu-ruby.vercel.app. I look forward to hearing from you.

Sincerely,

Kautsar Qaulan Sadida Baiquni
