[Hiring Manager]

[Company Name]

[Company Address]

Dear [Hiring Manager],

I am writing to apply for the **[Position]** role at **[Company Name]**. As a Fullstack Web Developer who specializes in frontend architecture, I build fast, scalable and pixel-perfect web applications, and I would be excited to bring that craft and energy to your team.

Over the past two years I have shipped production software across the modern JavaScript ecosystem. At Blue Soft IoT (Malaysia) I build company platforms and internal tools, including PHH Inventory, a steel-cutting and inventory management app built with React, Vite, TypeScript and Tailwind CSS. For the Serang City Government and the local Election Commission (KPU), I led the development of public-service websites and an e-Office travel-administration system, and I have delivered a point-of-sale platform (Akapack POS) with Next.js and Supabase. I work comfortably across the stack — from Next.js, React and TypeScript on the web to Flutter for mobile and Laravel on the backend.

I care deeply about the details that make a product feel premium: thoughtful motion, clean typography and a light, fast experience, all backed by maintainable code. I am also a committed, fast learner — a POSN Informatics Gold Medalist with IBM certifications in Artificial Intelligence, Generative AI and AI Ethics, alongside cloud fundamentals on AWS.

I would welcome the chance to discuss how my experience and enthusiasm can contribute to **[Company Name]**. Thank you for considering my application; you can explore my work and portfolio at web-portofolio-nu-ruby.vercel.app. I look forward to hearing from you.

Sincerely,

Kautsar Qaulan Sadida Baiquni
